

CareSys for Residential Care

CareSys provides the Retirement and Aged Care industry with a new way to manage their sites from development, through operations and into the future. CareSys is a proven business specific application including financial, operational and management features encapsulated into a single integrated system.

A snapshot of the major functionality included in CareSys :

- **Manage all your enquiries** - CareSys creates a single view of a prospect and their support network that is easily converted to a resident thereby ensuring a seamless experience for all enquiries. Track across multiple products channels so you find the right product for your customer
- **Asset and equipment management** – Village & facility design can be mapped to CareSys equipment, asset and room information. This allows all fixtures, furnishing and equipment to be tracked to ensure all assets owned by the operator are managed to reduce cost and increase performance. Preventative and adhoc maintenance management are built in with the option of combining tasks to manage large work items like refurbishments
- **Client Invoicing** – A very comprehensive billing system with consolidation for contribution funders, out of sync offsetting, pocket money and sundries. CareSys integrates with third party accounting systems and includes sales & purchase ledgers to manage automated cash collection, statements, aged debt, manage suppliers and purchase transactions and creditor analysis. Invoicing of residents also covers on-going fees, fees for service and usage charges for utilities.
- **Person Centred Care** – CareSys includes a highly flexible care delivery system with user defined and DOHA recognised predefined care and lifestyle templates which include management of care tasks via tablets and other handheld devices. Built into functionality to diarise tasks and manage visits to and by the resident gives staff a single view of their workload
- **Time & Attendance** – Capture staff working hours via CareSys Access Management Terminals and integrate data with payroll systems. Manage your staff rostering and work requirements including attendance and skills tracking directly matched against resident requirements.
- **Reporting** – A comprehensive suite of standard reports is complimented by easy to use customisable reporting. A dedicated portal gives village and facility managers up to date information in real time regarding occupancy, financial performance, key staffing indicators and much more.

The depth and breadth of the CareSys solution it is best understood in person. Contact Belgravia Health & Care now for an obligation free demonstration.
